4. Installation / Activation

- After downloading the Plugin as ZIP from Github, rename the extracted directory to Chart and transfer it to
 - Customizing/global/plugins/Services/COPage/PageComponent
- ii. Log in to the ILIAS installation as Administrator and go to Administration >Extending ILIAS > Plugins

- iii. In the list of plugins find the Chart plugin and choose Install in Actions
- iv. After installation choose Activate in Actions

The plugin has been installed and activated and is ready for use.

5. Usage

Create Chart

A chart can be created by clicking on the button "Click here to add content" and selecting the menu entry "Insert Chart".

The user should now fill in the following information about the chart:

- Title Chart
- Type Chart
- Data Format
- Key and Value for categories
- * All fields are required

The chart will be displayed as follows:

Edit Chart

After creating the chart, the user can edit it by clicking on edit on the chart object. The user can edit the following information for the diagram:

- Title Chart
- Type Chart
- Max displayed X-Axes or Y-Axes Value
- Data Format
- Currency Symbol
- Name of categories
- Name of datasets

The user can edit the value of datasets and the color of categories and datasets too:

6. Chart types

There are four different chart types:

i. Pie Chart

ii. Line Chart

iii. Horizontal Bar Chart

iv. Vertical Bar Chart
